

Day 4/7 Hackathon Update: Dynamic Frontend Components for Car Rentals Overview

- Focused on enhancing the frontend of the Car Rental Marketplace by developing dynamic, responsive, and user-friendly features.

Key Achievements

1. Dynamic Components

- Created car listing components, detailed car pages, and user history sections.

2. Enhanced User Experience

- Added category filters, search functionality, and pagination to improve navigation and usability.

3. User Feedback Integration

- Developed a dynamic review section to display user feedback on car detail pages.

4. Seamless Transactions

- Integrated dynamic rental summaries and a payment method workflow to streamline the booking process.

5. Responsive UI

- Designed and styled the interface to ensure full responsiveness and accessibility across all devices.

Next Steps

- Continue refining the UI based on testing and feedback.
- Begin integration with backend APIs to connect the frontend with real-time data.
- Optimize performance and ensure scalability.

Stay tuned for more updates as the project progresses!
